

TDD Peer Group:

Write a failing test									
Write the simplest code to pass the test									
Refactor to remove duplication									
Write the assertion first and work backwards									
See the test fail									
Write meaningful tests									
Triangulate									
Keep your test and model code separate									
Isolate your tests									
Organise your tests to reflect model code									
Maintain your tests									
Tests should test one thing									
Don't refactor with a failing test
